Module: m/00/110

'*timeware® system requirements...*'

Remember: the more memory and faster processor your server has *above* that recommend by the operating system manufacturer, the faster your timeware® system will perform. Customers with large numbers of employees should consider higher specification servers.

timeware® server

timeware requires *at least* the hardware specification recommended by the operating system manufacturer.

timeware requires *at least* 1Gb of disk space for the application installation and the generating of reports.

We recommend that the server has *at least* a 100Mbps network interface

timeware also requires a USB port for the software protection dongle.

To calculate the approximate amount of disk space required in the future, use the following rule:

*100 employees booking 4 times per day equates
to an additional 200Mb of hard disk space used per year...*

timeware® client

timeware requires *at least* the hardware specification recommended by the operating system manufacturer.

timeware requires at least 1Gb for the application installation and the generating of reports.

We recommend that the server has *at least* a 100Mbps network interface
